

Question :Largest Element in Array

Difficulty: **Basic** Accuracy: **67.48%** Submissions: **486K+** Points: **1** Average Time: **20m**

Given an array **arr[]**. The task is to find the **largest** element and return it.

Examples:

Input: arr[] = [1, 8, 7, 56, 90] **Output:** 90 **Explanation:** The largest element of the given array is 90.

Input: arr[] = [5, 5, 5, 5] **Output:** 5 **Explanation:** The largest element of the given array is 5.

Input: arr[] = [10] **Output:** 10 **Explanation:** There is only one element which is the largest.

Constraints:

$1 \leq \text{arr.size()} \leq 106$

$0 \leq \text{arr}[i] \leq 106$

ANSWER:

the final answer should be with time complexity $O(n)$ and space complexity $O(1)$.

HINT:as it is said $O(n)$ we should use a linear searching using max variable.

Program :

```
class Solution {
    public static int largest(int[] arr) {

        int max=-999;
        for( auto i:arr){
            if(i>max)
                max=i;
        }
        return max;
    }
}
```
